Dan's victory in the Presidential election enshrines Romania's pro-EU orientation, helping to ease market concerns, but political noise is far from over. In a surprise turnaround, pro-EU, centrist, N. Dan, mayor of Bucharest, defeated (with 53.6% of the vote) ultra-nationalist G. Simion, leader of the AUR party, in a highly contested Presidential runoff to become Romania's next President. Recall that Dan had come a distant 2nd in the 1st round 2 weeks ago, with just 21.0% of the vote.

Besides nominating the PM and other senior officials, the President steers foreign policy and heads armed forces but has no official role in economic policy. Still, the law gives the President significant leverage over the formation of the Government, as it does not require him to give the mandate to the largest party.

Importantly, the election result enshrines Romania's strategic pro-EU orientation. The latter would have been put into question in the event of Simion's victory, given his ultra-nationalist euro-sceptic agenda (involving detachment from the conflict in Ukraine, in which Romania plays an important role by providing critical logistical support to the NATO). Note that Simion had promised -- if elected -- to nominate as PM the frontrunner of the (controversially annulled) November Presidential election, nationalist pro-Russian C. Georgescu.

Still, return to political normality is yet to be secured, as the formation of a new Government is pending. Recall that the PSD withdrew from the ruling coalition (also comprising the PNL and the UDMR) a day after Simion's landslide victory in the 1st round of the Presidential election, which also saw the ruling coalition's candidate failing to pass into the 2nd round.

Our baseline scenario assumes that the parties of the outgoing pro-EU coalition, together with the USR (from the ranks of which Dan comes), would back a new Government, without necessarily all of them holding ministerial posts. Still, considering the challenges lying ahead and the need for political costly measures and reforms, involving parties would likely face an uphill battle to maintain political stability, with negative implications for policy implementation. Should political players fail to form a viable Government, snap elections would be then called, prolonging political uncertainty.

The remedy of the economy's twin deficits requires costly political measures and reforms. Romania has been long facing large budget and current account deficits. Amid a prolonged election cycle, the latter widened to 9.3% of GDP in FY:24 -- the highest in the EU -- with the former jumping to 8.4% of GDP. Uninterrupted access to EU funding and global debt markets has been crucial so far for Romania's ability to finance them.

Romania is under the EC's Excessive Deficit Procedure, having committed to bring its budget deficit below the EU threshold of 3.0% of GDP by 2031. However, a weak y-t-d budget execution appears to be putting the plan's targets off track, underscoring the need for corrective measures.

Worryingly, should authorities' capacity to proceed with such measures be brought into question, leading the EC to open infringement procedures (potentially involving suspending part of EU funding), while hitting investor confidence, Romania would find itself in a difficult position to finance its twin deficits, increasing the odds for a painful economic adjustment.

Markets rallied on Dan's election, with RON recouping part of the losses recorded in the wake of the 1st round of the Presidential election (currently trading at 5.06 against the EUR versus a record-low of 5.12, still below, though, its pre-election rate of 4.97), 10-year bond yields returning to their pre-election (high) level of 7.5% (against a peak of 8.5%) and sovereign spreads narrowing, yet still trading at junk levels (note that all rating agencies have Romania on the lowest investment grade with negative outlook).

Sources: Reuters, NBRNM, MAKSTAT & NBG estimates

Higher-for-longer interest rates boosted banks' profitability to new record highs in FY:24. In FY:24, banks' profits surged by c. 22.0% to a new record-high MKD 17.4bn (1.8% of GDP), with (annualised) ROAE and ROAA strengthening further to 17.6% and 2.2%, respectively, among the highest in the region, from 16.1% and 2.0% in FY:23.

Unsurprisingly, solid -- albeit decelerating -- net interest income growth (NII, up 12.3% in FY:24 following a rise of 42.3% in FY:23) accounted for the bulk of the increase in profits, with (stronger) credit expansion replacing (higher) interest rates as the key underlying growth driver. Indeed, banks' (gross) loan portfolio expanded dynamically across all segments (up 11.2% at end-2024 against a rise of 4.3% a year ago), amid improved economic growth prospects, while NIM firmed only slightly (to 371 bps -- more than double that of EU banks -- from 364 bps in FY:23), at the same time.

Net non-interest income growth (NNII, up 8.5% in FY:24 against an increase of 3.4% in FY:23, driven by net fees and commission income) also added to growth in overall profitability, but modestly.

Stronger top line revenue was partly offset by a broad-based, almost double-digit, increase in operating expenses (up 9.0% in FY:24 following a rise of 18.7% in FY:23), despite further moderation in inflation to low single-digits. That said, the (annualized) cost-to-income ratio improved further to c. 44% in FY:24, below that of EU banks (c. 53.0%).

Provisioning charges were curtailed drastically in FY:24, providing a critical contribution to profitability. Indeed, with asset quality remaining in check (the NPL ratio inched down to 2.7% at end-2024 from 2.8% a year ago), on the one hand, and perceived uncertainty having subsided markedly, on the one hand, banks found some room to lower the cost of risk to 78 bps in FY:24 from 107 bps a year ago. A boost in capital gains from sale of assets and collected previously written-off claims gave a further push to overall profitability.

Lower interest rates, following the NBRNM's easing cycle, combined with higher provisioning needs, reflecting heightened uncertainty, should drive profitability to more moderate -- yet above historical average -- levels in the period ahead. The initiation of the central bank's easing cycle in September '25 (with the key policy rate having since been reduced by 95 bps, to 5.35%) has put the brakes on widening interest margins (with NIM having fallen slightly in Q4:24). That said, the compression in NIM is set to be slow, reflecting not only the cautious pace of rate-cutting, but also banks' relatively comfortable liquidity position (the loan-to-deposit ratio eased to 84.5% at end-2024 from 85.9% a year ago). Importantly, solid double-digit credit expansion (boosted, among others, by on-lending from the Government's loan from Hungary) should partly compensate for moderating NIM, sustaining NII growth.

Although our baseline scenario assumes GDP growing at a rate slightly below that of its long-term potential (c. 3.0%) over the medium-term, we recognize that downside risks have been heavily skewed to the downside, due to persistent global trade uncertainties. With a view to accommodating these risks, banks are expected to build up provisions at a faster pace given, *inter alia*, the relatively high share of underperforming loans (accounting for c. 13.0% of outstanding loans). Note that the NPL coverage ratio remains quite strong, at c. 63.0% at end-2024, above the EU average of 41.0%.

On a positive note, solid profitability has been translated into stronger capital buffers, with the capital adequacy ratio having firmed to 18.9% at end-2024 from 18.1% at end-2023, providing a line of defense against potential losses. A reversal in real estate prices (with the latter having gone up c. 60% since end-2019) is a key risk to consider in the period ahead, with the NBRNM having gradually raised its counter-cyclical buffer by 0.75 pps, to 1.25%, to this end, while having tightened the LTV and DSTI limits.

Sources: Reuters, Central Election Commission & NBG estimates

Incumbent PM E. Rama to serve an unprecedented 4th term after his Socialist Party (PS) landslide victory in the May 11th Parliamentary election. The centre-left ruling SP won the election by a significant margin, gathering 53.3% of the vote (above the 2021 election outcome of 48.7%), and boosting its seats to 83 (up from 74) in the 140-seat assembly, thus retaining an outright majority. Its main rival, the opposition right-wing Democratic Party (PD) of former PM and President S. Berisha -- who was released at end-2024 from a year-long house arrest on corruption charges -- in coalition with the leftist Freedom Party (PL) of former PM and President I. Meta (arrested in October 2024 also on corruption allegations) that used to be the 2nd largest opposition party, and more than 20 smaller parties, including 2 minority parties -- garnered 32.9% of the vote, securing 50 seats (down from 63 in the 2021 election). The Social Democratic party (PSD) came 3rd with just 3.1% of the vote (3 seats). Three other recently formed political movements also entered the new assembly, together gaining 4 seats.

Indeed, despite several corruption scandals (involving arrests and convictions of prominent SP members and Rama's close allies), the SP -- in power since 2013 -- retains strong public support, capitalizing on steady progress with the EU agenda, which peaked with the long-awaited opening of EU accession process in October 2024 (with 24 out of a total of 35 negotiating chapters having been opened since then), robust economic performance (with Albania's GDP per capita in PPP terms having almost doubled over the past decade, despite the triple shocks -- i.e. the 2019 earthquake, COVID-19 pandemic and the energy crisis -- supported by a booming tourism sector) amid prudent macroeconomic policies.

At the same time, support for the opposition PD has been waning, due to persistent deep internal infighting since the resignation of its historical leader, S. Berisha, in 2013, resulting in leadership changes and party splits.

Note that the DP has long been at loggerheads with the SP, polarizing the political landscape. The standoff is not expected to wind-down, as S. Berisha dismissed the election outcome, due to allegations of vote-buying, and called for protests.

Further progress with EU accession remains key priority for the Government as it would help accelerate the pace of economic convergence with the bloc. Albeit on an upward trend, Albania's GDP per capita (PPP) stands at just 36.0% of the EU average -- the lowest among EU candidate countries. The pace of convergence has been quite fast over the past few years, thanks to above-trend growth -- outperforming neighbouring peers -- reflecting buoyant tourism activity (and its spillovers to the economy). The positive output gap is expected to close by 2026, as tourism growth normalizes, with GDP growth returning to its long-term potential of c. 3.3%. However, the latter is markedly lower than estimated prior to the pandemic, largely due to the shrinking labour supply (with the population having dropped by c. 14.0% in 2011-23), following continued migration and rapidly ageing population. Meanwhile, albeit gradually rising, labor and total factor productivity remain well below that of the EU.

Progress with EU accession negotiations should help boost Albania's potential GDP growth, through deep structural and institutional reforms (addressing productivity bottlenecks, infrastructure gap and governance shortcomings), largely financed by the EU. Available EU funding includes: i) the Instrument for Pre-Accession Assistance III, amounting to c. EUR 0.9bn (equivalent to 3.3% of FY:25 GDP) in 2024-27; ii) the Reform & Growth Facility for the Western Balkans, with total indicative allocations of EUR 0.9bn to Albania in 2024-27; and iii) investments under the Western Balkans Investment Framework. According to the IMF, effective use of these funds and implementation of EU-mandated structural reforms could result in a double pace of convergence with the EU.

DISCLAIMER: This report has been produced by the Economic Research Division of National Bank of Greece S.A., which is regulated by the Bank of Greece and the Hellenic Capital Market Commission, and is provided solely as a sheer reference for the information of experienced and sophisticated investors who are expected and considered to be fully able to make their own investment decisions without reliance on its contents, i.e. only after effecting their own independent enquiry from sources of the investors' sole choice. This report does not constitute investment research or a research recommendation, and as such, it has not been prepared under legal requirements designed to promote investment research independence. The information contained in this report does not constitute the provision of investment advice and under no circumstances is it to be used or considered as an offer or an invitation to buy or sell or a solicitation of an offer or invitation to buy or sell or enter into any agreement with respect to any security, product, service or investment. No information or opinion contained in this report is sufficient to support an investment decision – and should constitute any representation or warranty as to future performance of any financial instrument, credit, currency rate or other market or economic measure. Past performance is not necessarily a reliable guide to future performance. It is duly stated that investments products include investment risks, among which the risk of losing part of or the entire capital invested. National Bank of Greece S.A. and/or its affiliates shall not be liable in any matter whatsoever for any consequences (including but not limited to any direct, indirect or consequential losses, loss of profits and damages) of any reliance on or usage of this report and accepts no legal responsibility to any investor who directly or indirectly receives this report. The final investment decision must be made by the investor and the responsibility for the investment must be taken by the investor.

Any data provided in this report has been obtained from sources believed to be reliable but has not been independently verified. Because of the possibility of error on the part of such sources, National Bank of Greece S.A. does not guarantee the accuracy, timeliness or usefulness of any information. Information and opinions contained in this report are subject to change without notice and there is no obligation to update the information and opinions contained in this report. The National Bank of Greece S.A. and its affiliate companies, its representatives, its managers and/or its personnel or other persons related to it, accept no responsibility, or liability as to the accuracy, or completeness of the information contained in this report, or for any loss in general arising from any use of this report including investment decisions based on this report. This report does not purport to contain all the information that a prospective investor may require. Recipients of this report should independently evaluate particular information and opinions and seek the advice of their own professional and financial advisers in relation to any investment, financial, legal, business, tax, accounting or regulatory issues before making any investment or entering into any transaction in relation to information and opinions discussed herein.

National Bank of Greece S.A. has prepared and published this report wholly independently of any of its affiliates and thus any commitments, views, outlook, ratings or target prices expressed in these reports may differ substantially from any similar reports issued by affiliates which may be based upon different sources and methodologies. This report is not directed to, or intended for distribution to use or use by, any person or entity that is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to any law, regulation or rule. This report is protected under intellectual property laws and may not be altered, reproduced or redistributed, or passed on directly or indirectly, to any other party, in whole or in part, without the prior written consent of National Bank of Greece. All the views expressed in this report accurately reflect author's personal views solely, about any and all of the subject issues. Further, it is certified that no part of any of the report author's compensation was, is, or will be directly or indirectly related to the specific or views expressed in this report.
